Scientists Have Discovered what The Very First Animal On Earth Was

By Nickolaus Hines on March 4, 2016

New research shows that the simple sea sponge was the very first animal on Earth. Image Source: Wikimedia Commons

It's been confirmed: the first animal to ever evolve on Earth is...the sea sponge. We realize this might be a little disappointing, but wait, there's more! Real life sea sponges will never be as popular as Sponge Bob, but they are *much* more interesting than you might first assume.
